

0.7A Low Dropout Positive Voltage Regulator

LM1117N3 series

Features

- Adjustable or Fixed Output
- Output Current of 0.7A
- Low Dropout, 1.4V max at 0.5A Output Current
- Good Noise Rejection
- Output Current Limiting
- Built-in Thermal Shutdown
- Fast Transient Response
- Pb-free lead plating package
- Can operate using MLCCs in the capacitance range of 2μF to 10μF

Description

The LM1117 series of positive adjustable and fixed regulators are designed to provide 0.7A with high efficiency. All internal circuitry is designed to operate down to 1.4V input to output differential. The product is specifically designed to provide well-regulated supply for low-voltage IC application such as high-speed bus termination and low current 3.3V logic supply, and other applications such as VGA cards.

Applications

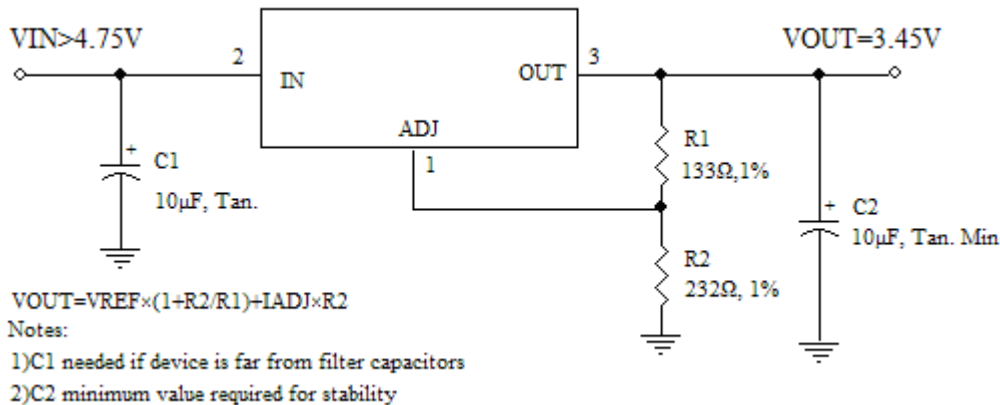

- High Efficiency Linear Regulators
- Post Regulators for Switching Supplies
- Adjustable Power Supply

Typical Application Data

Fixed Voltage Regulator

Adjustable Voltage Regulator

Note : 1. See thermal regulation specifications for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing.
 2. Line and load regulation are guaranteed up to the maximum power dissipation of 1W when device is mounted on FR-4 board and the pulse width is less than 5s. Power dissipation is determined by the difference in input and output voltage and the output current. Guaranteed maximum power dissipation will not be available over the full input/output range.
