Thermal Data

Parameter	Symbol	Value	Unit
Thermal Resistance, Junction-to-case, max	$R_{\theta JC}$	1.2	$^{\circ}\text{C}/\text{W}$
Thermal Resistance, Junction-to-ambient, max (Note 2)	$R_{\theta JA}$	50	

- Note : 1. The power dissipation P_D is based on $T_{J(\text{MAX})}=175^{\circ}\text{C}$, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
2. The value of $R_{\theta JA}$ is measured with the device mounted on 1 in² FR-4 board with 2 oz. copper, in a still air environment with $T_A=25^{\circ}\text{C}$. The value in any given application depends on the user's specific board design. The power dissipation P_{DSM} is based on $R_{\theta JA}$ and the maximum allowed junction temperature of 150°C , and the maximum temperature of 175°C may be used if the PCB allows it.
3. Pulse width limited by junction temperature $T_{J(\text{MAX})}=175^{\circ}\text{C}$.
4. Ratings are based on low frequency and low duty cycles to keep initial $T_J=25^{\circ}\text{C}$. 100% tested by conditions of $V_{DD}=25\text{V}$, $I_D=40\text{A}$, $L=0.1\text{mH}$, $V_{GS}=10\text{V}$.
5. Calculated continuous drain current based on maximum allowable junction temperature.
6. The static characteristics are obtained using $<300\mu\text{s}$ pulses, duty cycle 0.5% maximum.
7. The $R_{\theta JA}$ is the sum of thermal resistance from junction to case $R_{\theta JC}$ and case to ambient.

2.For devices mounted on FR-4 PCB of 1.6mm or equivalent grade PCB. If other grade PCB is used, care should be taken to match the coefficients of thermal expansion between components and PCB. If they are not matched well, the solder joints may crack or the bodies of the parts may crack or shatter as the assembly cools.
