**Thermal Data**

Parameter	Symbol	Value	Unit
Thermal Resistance, Junction-to-case, max	$R_{\theta JC}$	2.3	$^\circ\text{C}/\text{W}$
Thermal Resistance, Junction-to-ambient, max (Note 2)	$R_{\theta JA}$	50	

- Note :
- The power dissipation  $P_D$  is based on  $T_{J(MAX)}=175^\circ\text{C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
  - The value of  $R_{\theta JA}$  is measured with the device mounted on 1 in<sup>2</sup> FR-4 board with 2 oz. copper, in a still air environment with  $T_A=25^\circ\text{C}$ . The power dissipation  $P_{DSM}$  is based on  $R_{\theta JA}$  and the maximum allowed junction temperature of  $150^\circ\text{C}$ .
  - Pulse width limited by junction temperature  $T_{J(MAX)}=175^\circ\text{C}$ . Ratings are based on low frequency and low duty cycles to keep initial  $T_J=25^\circ\text{C}$ .
  - 100% tested by conditions of  $L=0.1\text{mH}$ ,  $V_{GS}=10\text{V}$ ,  $I_{AS}=20\text{A}$ ,  $V_{DD}=15\text{V}$
  - Calculated continuous current based on maximum allowable junction temperature. Guaranteed by design, not subject to 100% production test. Current is limited to 43A by course bond technology.
