Thermal Data

Parameter		Symbol	Steady State	Unit
Thermal Resistance, Junction-to-ambient	*a	R _{θJA}	150	°C/W

Note:

- *a. The value of R_{θJA} is measured with the device mounted on 1 in² FR-4 board with 2 oz. copper, in a still air environment with T_A=25°C. The power dissipation P_D is based on R_{θJA} and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.
- *b. Repetitive rating, pulse width limited by junction temperature T_{J(MAX)}=150°C. Ratings are based on low frequency and low duty cycles to keep initial T_J=25°C.
- *c. Human body model, 1.5kΩ in series with 100pF.

SOT-23 Dimension

The diagram shows three views of the SOT-23 package: a top view with dimensions D, b, E1, E, 1, 2, 3, e, and e1; a side view with dimensions L1, L, c, and a lead angle of 0.25 degrees; and a perspective view with dimensions A1, A2, and A.

Marking:

The marking diagram shows a rectangular package with a top lead (D), two bottom leads (G and S), and a central marking area. The marking area contains the device code '123K' and a date code symbol (two crossed arrows). Arrows point from the labels 'Device Code' and 'Date Code' to their respective parts in the diagram.
